PROFESSIONAL SUMMARY

A motivated and enthusiastic person, currently specialising in Artificial Intelligence at Macquarie University. I have worked in IT industry professionally for more than 2 years, specifically in the domains of FinTech, Artificial Intelligence, Website and Application Software Development. My expertise is backend development focused on architectural and ground up building of ideas. Furthermore, having experience in partner and vendor management, I can back and forth on requirements from business point of view as well as technical point of view.

PROJECTS

ChefHQ - Your AI sous-chef

- Developed a comprehensive dashboard-analytics platform for all-in-one kitchen management.
- AI-assisted cooking-on-the-go, menu planning, recipe generation and inventory management.
- Social-media platform built-in for chef networking and recipe sharing
- Integrations with popular supermarkets for direct ordering of ingredients and inventory items, personalised to each recipe.

Inume AI: AI-powered personalized journey and trip designing application powered by the Cohere LLM API.

- Integrated Cohere LLM API paired with Retrieval Augmented Generation to dynamically generate travel itineraries tailored to user preferences.
- Deployed with AWS services including S3 for media storage, EC2 for hosting, RDS for database management, and SageMaker for potential AI enhancements.
- Built on Django framework, providing robust APIs through Swagger, secure OAuth2 authentication, and subscription management via Stripe.
- Developed frontend in React Native (Expo) with Redux for state management, and implemented caching through Context API.

Gamenest Arcade IoT: IoT-powered control-analytics dashboard platform facilitating administration of arcade consoles remotely.

- Lead the production as Full-Stack Lead and developed backend services of the app spanning over architectural design, database design (MySQL) and API development.
- IoT-based data operations performed via InfluxDB Cloud and ESP32 micro-controller over WebSockets and MQTT protocol for event-driven and Over-the-Air communication.
- Deployed front and back stacks to AWS EC2 and configured network via Route 53, Nginx and Apache LAMP stack for custom domain integration from one.com.
- Optimized frontend and backend via client-side cache rendering and AWS Load Balancer to reduce data load delay by 40 percent.

WORK EXPERIENCE	<i>Development and Technology Intern</i> <i>StackUp Technologies W.L.L</i>	<i>Jul 2025 - Sep 2025</i>
	- Placed as an assistant to the Founding Product Manager, related to tasks in development, business requirement gathering and execution matters. - Facilitated crafting technical documentations for the development team for implementation in API integrations with various Open Banking partners. - Conducted overseeing of vulnerability assessment of the application deriving security insights and delegating to the tech team. - Resulted in completion of all my tasks allocated over the period of 3 months and being promoted to project manager for a full-time role.	
	<i>Full-Stack React Native Developer</i> <i>DeepViz</i>	<i>Jun 2024 -October 2024</i>
	- Hired for contract work as a Full-Stack React Native Developer, focused on iOS and Apple ecosystem, for a AI-assisted travel itinerary application. - Collaborated as a peer-programmer to a fellow React Native Developer working on the frontend system of the application, contributing to LLM response (Cohere) parsing received from the backend. - Developed frontend persistent store and integrated authentication via Clerk API, and paired the system with Stripe API for payment integration/subscription model. - Resulted in a MVP which allowed user to onboard in Canada, based on 3 cities: Montreal, Toronto and Vancouver, generating over 150+ itineraries across 40 unique users in a month	
EDUCATION	<i>Master of Information Technology (Artificial Intelligence)</i> <i>Macquarie University, Sydney, Australia</i>	<i>July 2026 - July 2028</i>
	<i>Bachelor of Science in Computer Science</i> <i>National University of Computer and Emerging Science, Karachi, Pakistan.</i>	<i>Aug 2021 - Jun 2025</i>
SKILLS	Programming Languages: Go, TypeScript, Python, SQL Frameworks and Libraries: NodeJS, ReactJS, Gin, Postman, React Native Expo, PostgreSQL, WebSockets Cloud and Others: AWS (RDS, EC2, S3, Route 53), Microsoft Azure (AVMs, ExpressRoute),	
EXTRA CURRICULAR ACTIVITIES	Macquarie University Incubator START Program: Gained entrepreneurial skills for early startup, focused on hands-on learning through pitching and investor deck creation.	
HOBBIES	<i>Self-improvement books, podcasts, Football (Soccer), Gym, Entrepreneurial skill-building, networking.</i>
